PROFESSIONAL SUMMARY

Backend Developer with hands-on experience building high-concurrency Django systems and integrating machine learning models into production APIs. Built real-world systems with payment workflows, transaction safety, and fraud detection pipelines. Focused on performance, reliability, and scalable backend design.

TECHNICAL SKILLS

- Backend: Python · Django · DRF · REST API · Webhooks · SQL
- Databases: PostgreSQL · MySQL · Django ORM · Query Optimization
- AI & ML: XGBoost · LightGBM · OpenCV · Scikit-learn · SHAP · SMOTE · Pandas · NumPy · Model Deployment
- Tools: Git · GitHub · Postman · Linux
- Concepts: DSA · OOP · Database Transactions · SDLC · Agile

PROFESSIONAL EXPERIENCE

Python Developer Intern (AI/ML Integration) Zephyr Technologies, Mangalore
| Dec 2024 – Apr 2025

- Developed RESTful API endpoints using Django to serve real-time ML predictions, reducing inference latency by 15%.
- Architected asynchronous backend modules to handle real-time data ingestion and internal processing.
- Optimized Django ORM queries and database indexing, leading to a 20% improvement in API response times.
- Collaborated in an Agile environment using Git for version control, participating in the full SDLC from design to testing.

TECHNICAL PROJECTS

Bus Ticket Booking System (Django/MySQL) | [Live Demo](#) | [GitHub](#)

- Designed a high-concurrency booking engine with real-time seat locking using Database Transactions to prevent double-booking.
- Implemented secure payment workflows using Razorpay and Webhook listeners to ensure 100% data consistency between payments and bookings.
- Automated background tasks for PDF ticket generation and SMTP email delivery upon successful transaction.
- Engineered dynamic pricing logic and a secure cancellation flow to handle complex route-based schedules.

Credit Card Fraud Detection — FSXE Algorithm | Research Paper | [GitHub](#)

- Implemented FSXE (Feature Selected XGBoost Ensemble), combining Logistic Regression, Random Forest, and XGBoost using soft voting
- Achieved 87.76% Recall, improving fraud detection performance compared to baseline models
- Handled extreme class imbalance (0.17%) using SMOTE, improving Recall by 3%+
- Applied feature selection (SelectKBest) to reduce dimensionality and improve model efficiency
- Validated with 5-fold cross-validation and SHAP explainability for transparent per-transaction fraud reasoning
- Inspired by a 2024 IEEE Access study, extended with ensemble optimization and explainability

Face Recognition E-Vault (OpenCV/Django) | [GitHub](#)

- Developed a secure file storage system using OpenCV facial embeddings for biometric authentication.
- Implemented encrypted file storage and granular access control logic to protect sensitive user documents.

EDUCATION

Bachelor of Computer Applications (BCA)

Srinivas University | Degree Completed (Result Declared) – 2025

CGPA: 7.78 / 10

CERTIFICATIONS

- Machine Learning Specialization — Coursera, Andrew Ng (In Progress)
- AWS Cloud Practitioner (Pursuing)
